

## **Starry Night Sleep Technology Fact Sheet**

The Starry Night Sleep Technology Bed from Leggett & Platt is a pioneering combination of technology and bedding that uses diagnostic tools to moderate temperature, monitor body movements and alleviate snoring.

### ***It Does a Body Good***

- **Helps alleviate snoring**  
Starry Night detects snoring with a refined vibration-detection system (originally developed for military purposes) and automatically articulates sleep positions by seven degrees to help alleviate mild to moderate snoring. Once the snoring subsides, the bed returns to its original position.
- **Regulates bed temperature for comfort and cost savings**  
Using liquid-based Peltier technology from Chilipad, the mattress can be set to “pre-heat” or “pre-cool” both sides of the bed from 68 degrees to 117 degrees Fahrenheit. It eliminates the need to heat or cool the entire house during sleeping hours which saves money and helps the environment.
- **Monitors body movements and rhythmic breathing patterns**  
Vibration sensor and load cell technology measure how much a sleeper tosses and turns, and how much they get out of bed during the night. It compares these movements to a 30-day baseline measure of the sleeper and then provides tips to improve sleep quality. The same vibration sensor technology detects and monitors rhythmic breathing patterns that indicate relaxation.
- **Comfortably supports the ballerina and the bodybuilder**  
Leggett & Platt’s exclusive Joey™ Coil innerspring system uses a pocketed coil-within-coil system to create comfort for any size sleeper. The exterior coils have a luxurious feel and respond to body movements while the interior coils are pressure sensitive and increase their firmness in response to the amount of weight applied.

### ***Boogie Nights***

- **Theatre in the round**  
It includes a surround sound system with four eight-inch subwoofers, an audiophile ribbon tweeter for extremely smooth sound, and 2,500 watt RMS Amplification. The headboard projector boasts a 1080p LCD based projector with a 6000:1 contrast ratio and 2,000 lumens.
- **Tuned in**  
With Internet connectivity and wireless RF remote via Microsoft’s Media Center, iPod docking station, and DVR capability.
- **Power house**  
The Starry Night boasts 1.5 terabytes of disc storage for almost 400,000 songs or up to 2,000 hours of video. Its operating system runs on a solid state hard drive for extremely fast data transfer and low seek times. It also offers 4 gigs of ddr2 ram.

### ***Gotta Have It***

- **To market, to market**  
Starry Night will retail between \$20,000 - \$50,000 depending on the customizable features. It is scheduled for public availability in the first half of 2009.
